

Editorial

Legal education is no longer considered to be a study of jurisprudence and statutes. Law schools should look beyond to carve an identity in this competitive world. Today there is rapid progress in technology round the globe and we can visualise enormous development in all spheres of life. We can rightly call this era the age of artificial intelligence, as AI has become a significant process to shaping the prospects of humanity. We have seen AI impacting different aspects of life from education to warfare and even personal interactions. Although AI offers several benefits it poses a serious threat to our civilization drawing ethical concerns and misuse. Literature available in this regard reveals the challenges in the context of moral values, trust, privacy, etc.

In this backdrop the CMR School of Legal Studies has set a new benchmark by embarking on the latest challenges in the realm of AI. The goal is to keep in pace with the latest trend in the threshold of development. This edition of the Journal contains well researched articles not only on the issues and concerns of AI but also on contemporary areas. Some of the areas that have been explored are privacy issues, ethical dynamics, data protection, prospects of green economy, impact of bioterrorism, aspects of criminology and forensic science, competition law, etc. apart from this the journal also contains book reviews and case comments.

We are thankful to the contributors who have shared their views through their writings. I thank the faculty coordinators who have played an important role in the process of compiling this edition. My sincere gratitude is extended to the members of the management of CMR University for always being supportive in all our endeavors.

Prof. (Dr.) T.R. Subramanya
M.Phil & Ph.D (JNU)
Editor in Chief & Dean,
School of Legal Studies,
